

Shreyas Mahimkar : Assignment 7

1) Boosting with Optimal Decision Stumps

A) Diabetes

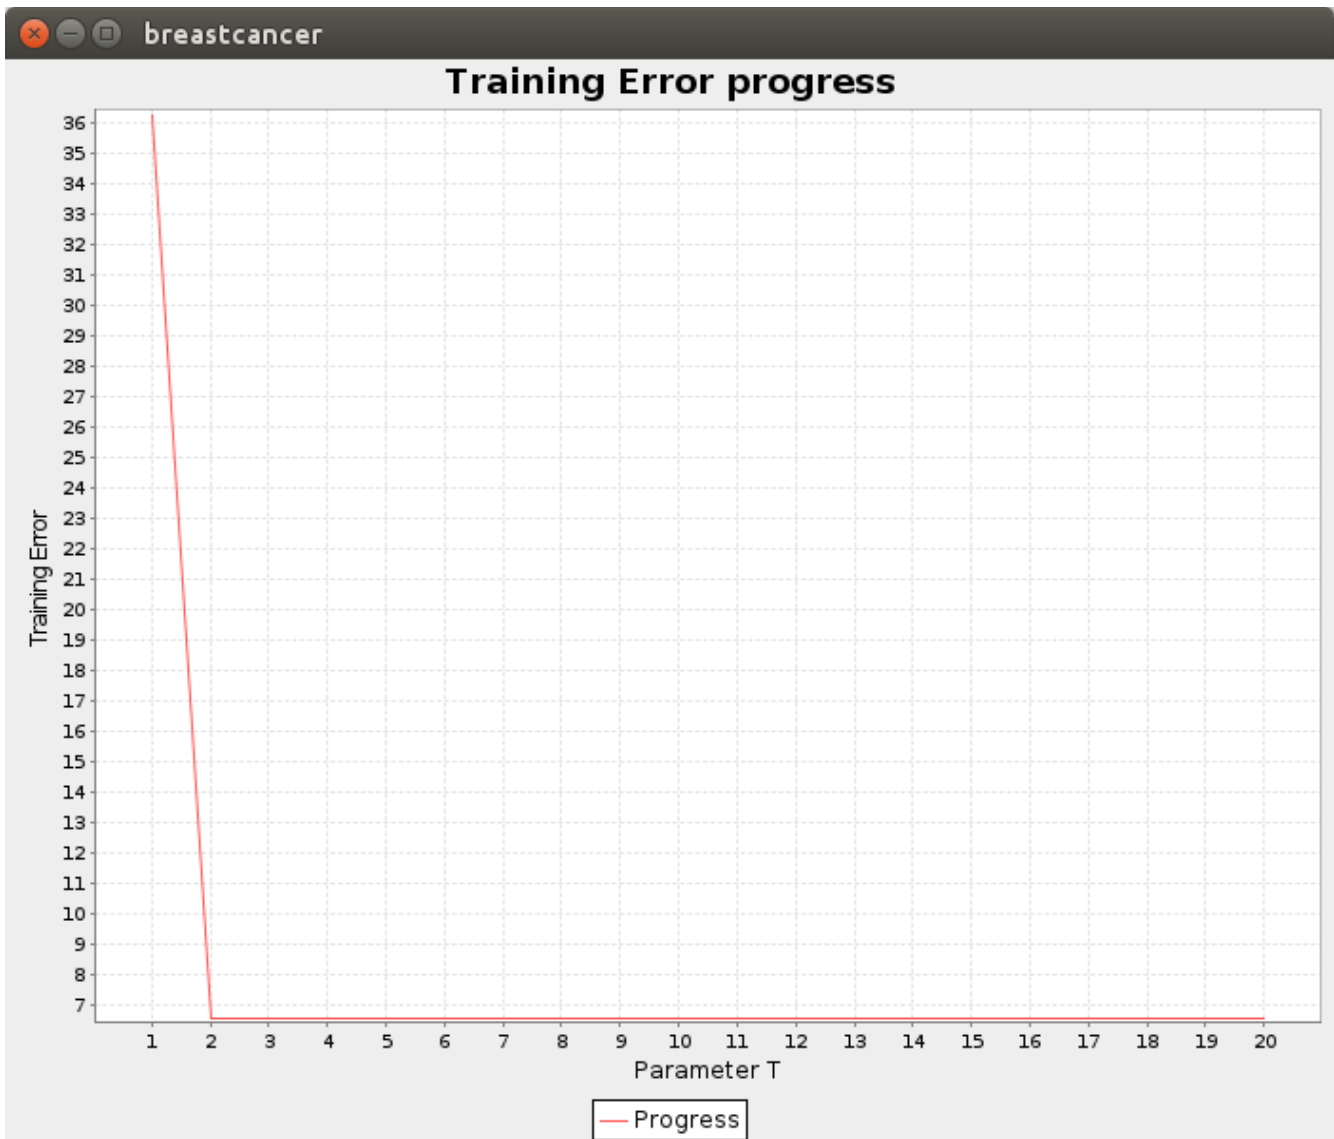

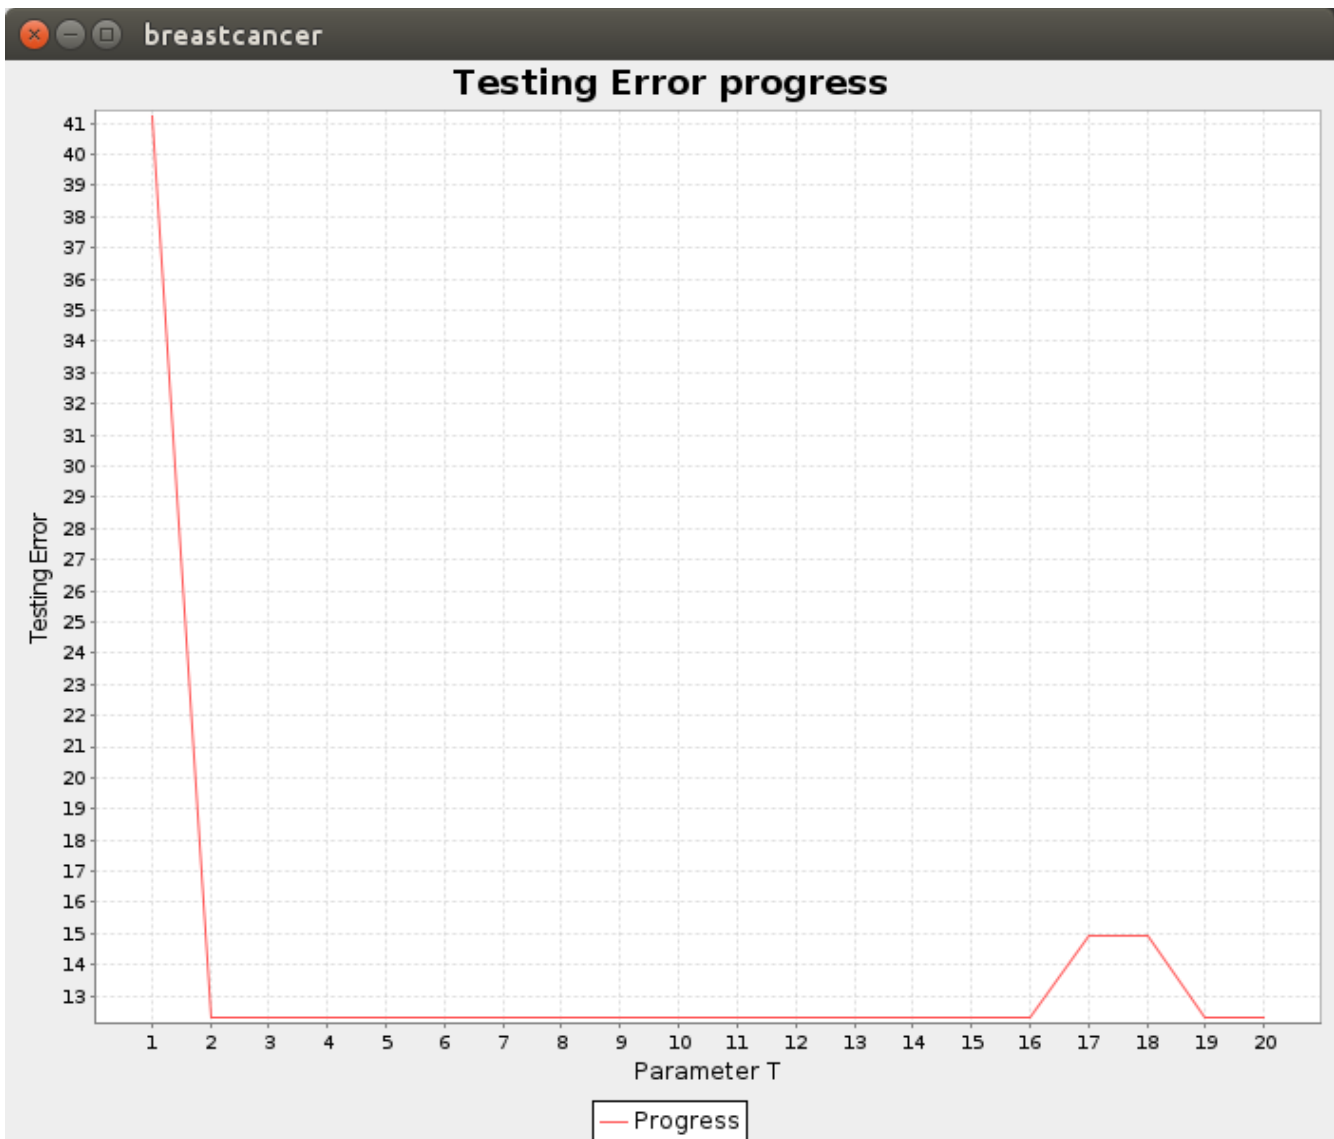

B) Breast Cancer

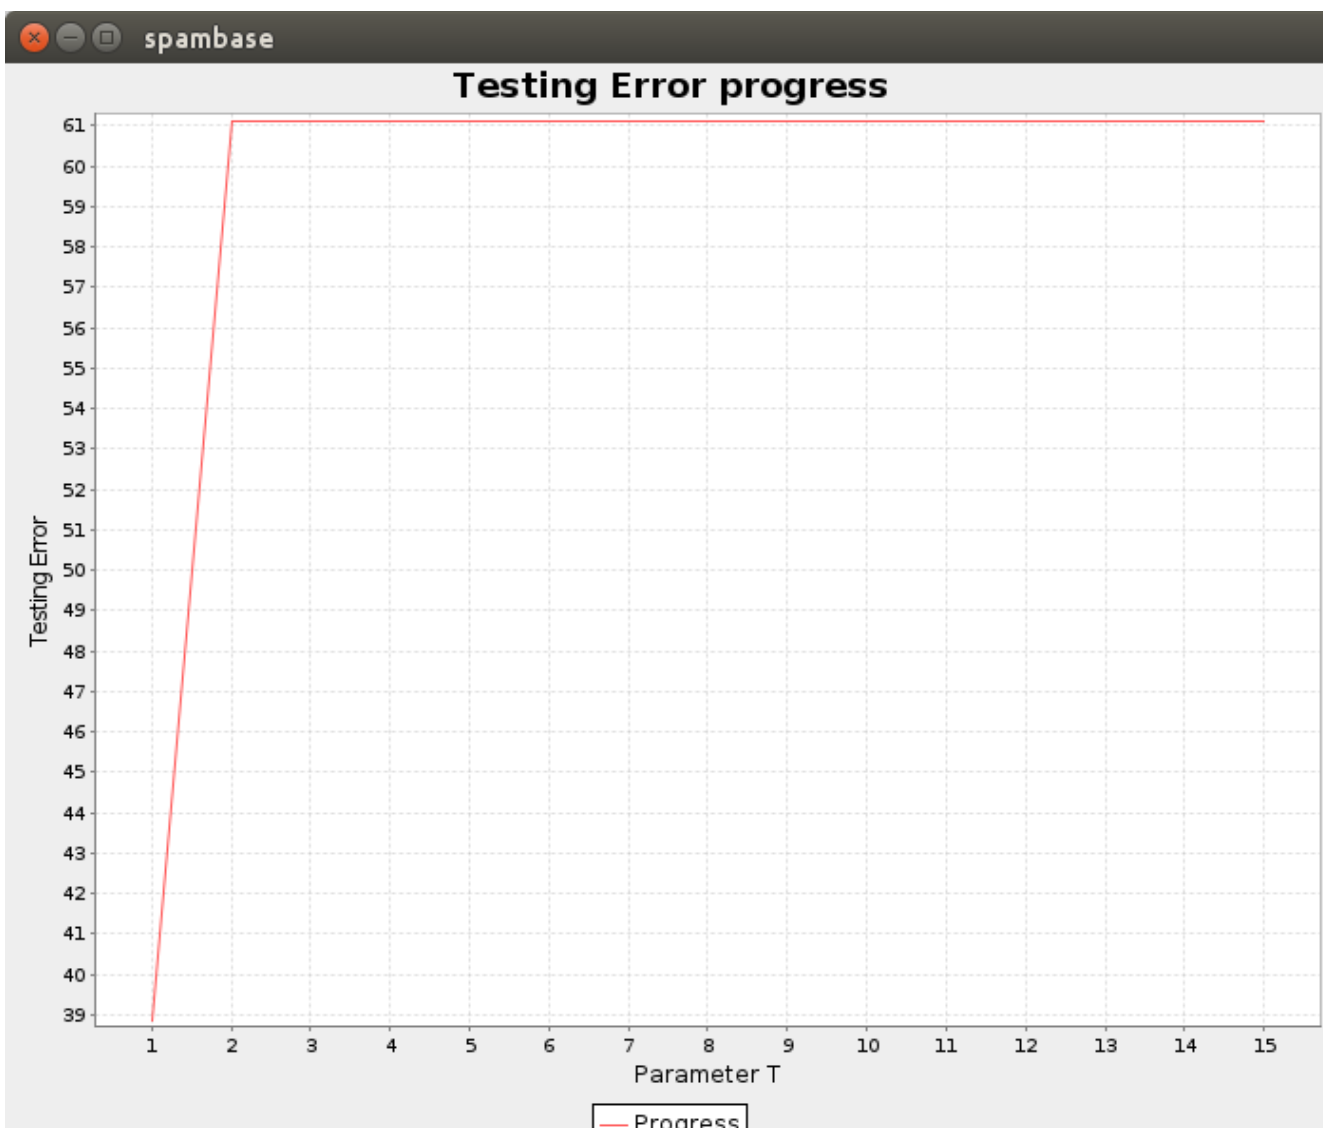

C) Spambase

2) Boosting with Random Decision Stumps

A) Diabetes

B) Breast Cancer

Setting Parameter T in Algorithm-1

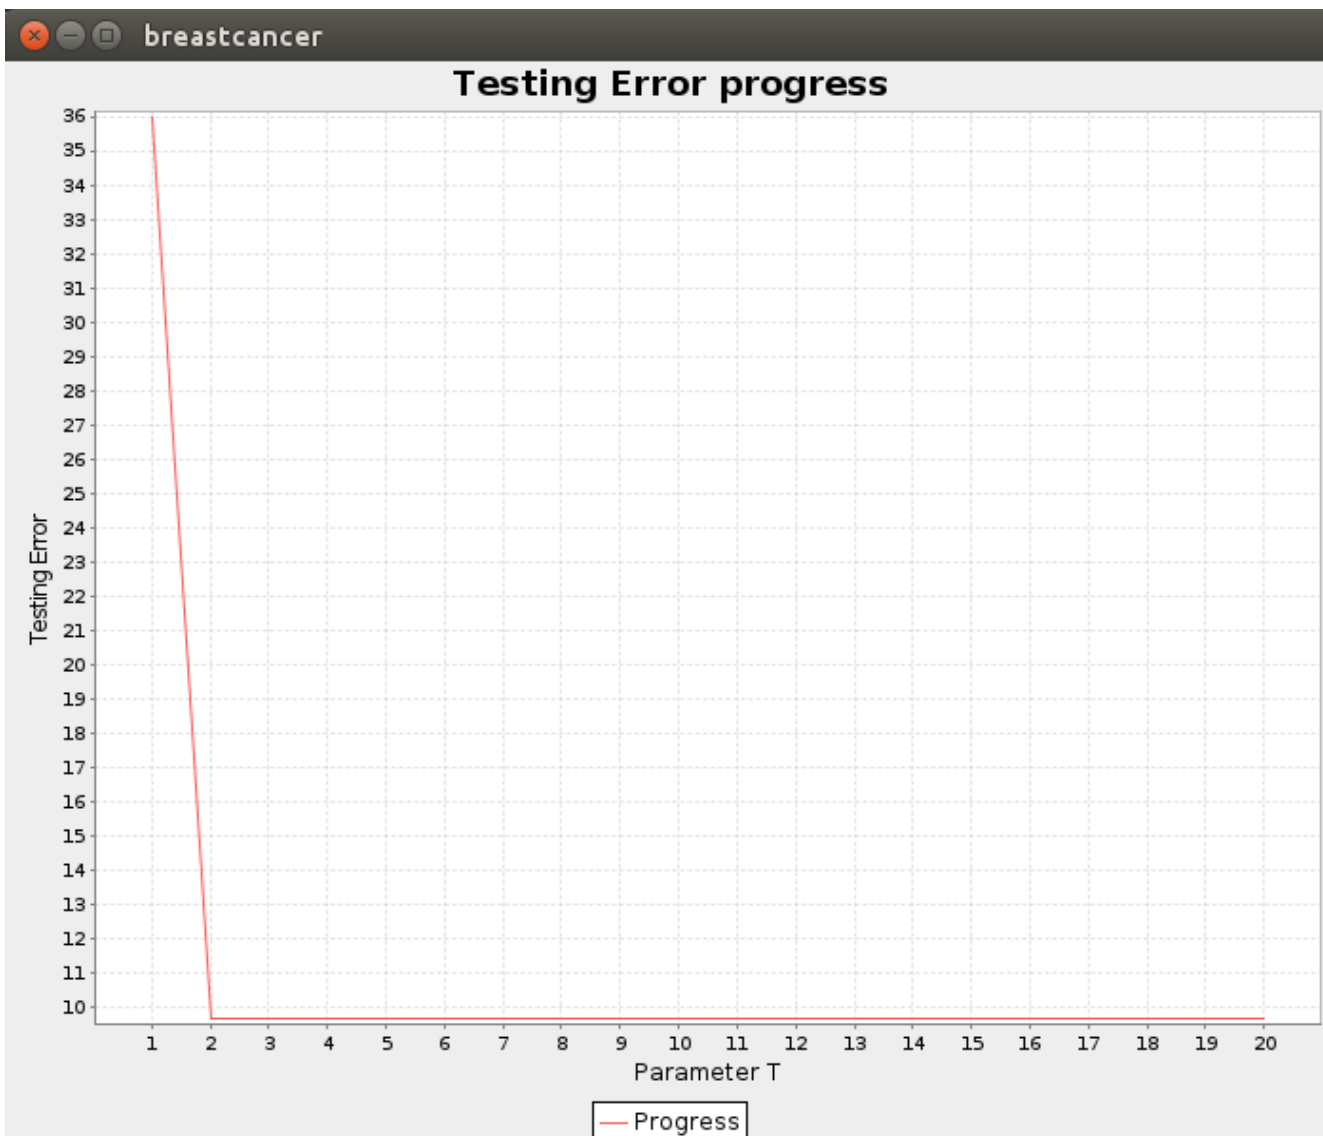

PseudoCode ::

```
let the best performance = 0
continuos_performance = 0
For t=1 ;; t=t+1
    Strong Classifier = Train Weak Classifiers
    performance = Test Strong classifier on training data
    if performance == best performance
        continuos_performance ++
    else
        continuos_performance = 0

    if performance > best performance{
        best performance = performance
        best parameter T = t
    }
    // If you find the continuos performance same 3 times consicutively break
    if continuos_performance == 3
        break;
```

You get the best parameter T at the end of the loop

C) Spambase
